

Mercado Ahora - Cloudflare DNS Setup

Use this table to configure DNS for mercadoahora.com.ar in Cloudflare. The web/API routing in the current code uses the apex domain and /api paths; api.mercadoahora.com.ar is not required unless a separate API host is added later.

DNS Records

Required?	Purpose	Type	Name	Target / Value	Proxy
Yes	Main website	A	@	187.127.254.101	Proxied
Yes	WWW shared links	CNAME	www	mercadoahora.com.ar	Proxied
No - remove for now	API subdomain	A	api	187.127.254.101	Proxied
Yes for email	Resend verification / SPF	TXT	From Resend	Copy exact value from Resend dashboard	DNS only
Yes for email	Resend DKIM 1	CNAME	From Resend	Copy exact value from Resend dashboard	DNS only
Yes for email	Resend DKIM 2	CNAME	From Resend	Copy exact value from Resend dashboard	DNS only
Yes for email	Resend DKIM 3	CNAME	From Resend	Copy exact value from Resend dashboard	DNS only
Recommended	DMARC	TXT	_dmarc	v=DMARC1; p=none; rua=mailto:no-reply@mercadoahora.com.ar	DNS only

Important DNS Notes

The current app does not use api.mercadoahora.com.ar. Frontend API calls use /api/v1 on the main domain, and Caddy routes /api/* to the backend. Remove the api record unless a separate API subdomain is intentionally added later.

All Resend records must remain DNS only. Do not proxy Resend TXT or CNAME records through Cloudflare.

Cloudflare Redirect Rule

Setting	Value
Rule name	Redirect www to apex
Condition	Hostname equals www.mercadoahora.com.ar
Redirect target	https://mercadoahora.com.ar\${uri.path}
Status code	301
Preserve query string	Yes

SSL/TLS Setting

Setting	Required value
Cloudflare SSL/TLS mode	Full
Full strict	Use only if the VPS has a valid public/origin certificate for both mercadoahora.com.ar and www.mercadoahora.com.ar

Final check: <https://mercadoahora.com.ar> should return 200 OK. <https://www.mercadoahora.com.ar> should redirect to <https://mercadoahora.com.ar>.
WhatsApp shared links should open the apex domain without a Cloudflare 525 error.
